Description

In metadata edition mask, users don't show that one type of entry is about choosing some predefined values (multiple choice). As there is no default prompt like "Select options", the user first think about what information to enter before realizing that he just have to select some options.

Moreover the search fonctionnality should also be integrated to help users finding the values they are looking for - hope that such fonctionnality is a default one proposed by Joomla

For a better understanding and user experience, I guess that multiple choice element should have a default prompt (i.e. "Select options") and a search mechanism like unique choice element behaviour.

History

- File placeholder.png added

Hi Bruno !

The search is active and works on multi-selects:

The place holder for multiple choices should be present, it is set in chosen JS params :

```
jQuery(document).ready(function (){
    jQuery('select').chosen({"disable_search_threshold":10,"allow_single_deselect":true,"placeholder_text_multiple":"S\u00e9lectionnez certaines options","placeholder_text_single":"S\u00e9lectionnez une option","no_results_text":"Aucun r\u00e9sultat correspondant"});
});
```

So there's a defect in JS or CSS in form I guess.

For example, if I unselect a value from a multi-select, the placeholder appears:

#2 - 09/07/2015 03:39 PM - Magoni Bruno

- Subject changed from Default prompt and search in multiple choices entry to Default prompt and search loop in multiple choices entry

Thanks for your feedback Yves, so I update title of issue to be more convenient

#3 - 09/28/2015 03:27 PM - Van Hoecke Hélène

- Status changed from Request For Comments to New
- Assignee changed from Technical Committee to Magoni Bruno

TC notice :

- Place holder seams to be a defect.
- The search fonctionnality is working fine : you have to type your search in the field (there is no search field like for unique choice)

#4 - 11/23/2015 11:49 AM - Magoni Bruno

- Assignee changed from Magoni Bruno to Technical Committee

So as I understand, such problem appears only on my easySDI implementation...
Could you please confirm that I understand well the TC answer; in such case I will reject this issue...

Thanks

#5 - 12/04/2015 10:48 AM - Van Hoecke Hélène

- Status changed from New to Rejected
- Assignee changed from Technical Committee to Magoni Bruno

You can reject this ticket and open a new one about the place holder problem that seems to be a defect.
