Description	
<p>Today, we cannot distinguish the "action" div in the html form generated by easySDI.</p> <pre><div class="action">Contact pour le jeu de données<i class="icon-white icon-plus-2"></i> </div></pre> <p>I would like to add a class to these div to overload the css and be able to hide some "action" div. Indeed some relations are repeated twice (cf screenshot).</p> <p>This class could be a slug of the relation label.</p> <p>The result should be :</p> <pre><div class="action contact-pour-le-jeu-de-donnees">Contact pour le jeu de données<i class="icon-white icon-plus-2"></i> </div></pre> <p>What do you think about it. Or do you have an other trick?</p>

Hi Thomas !

I simply used the parent class, something like :

```
.inner-fds-sla-gmd-dp-MD_Metadata-sla-gmd-dp-distributionInfo .action {display:none;}
```
