Functional impact:	
Description	
<p>Admin can currently define some text content to help the user when editing metadata. This text is displayed as a tooltip when cursor is passing above title of a class or attribute.</p> <p>I would suggest to improve and ease the task of editors by adding, beside "text" and "locale" stereotype, a list of suggestions definable by the admin in the backend.</p> <p>Similar help is proposed in Geosource here (Suggestion simple) : http://www.geosource.fr/docs/editor/new_metadata/index.html#suggestion-simple</p> <p><i>PS : note that this suggestion mechanizm is different from stereotype "list", "textchoice" or "localechoice" where editors can only choose among a list, whith no change of content possible.</i></p> <p>This would dramatically help editors and favorize more homogenous contents.</p> <p>Any comment/proposal on this issue will be appreciated.</p>	

History

#1 - 10/28/2011 12:39 PM - Mérour Xavier

Render types "textBox" and "textarea" should be also concerned by this suggestion mechanism.

#2 - 03/26/2014 10:30 PM - Magoni Bruno

- Project changed from CATALOG to easySDI

- Target version deleted (64)

#3 - 03/26/2014 10:31 PM - Magoni Bruno

- Category set to CATALOG
