easySDI - Feature #94
Add a basemap componant/module

Description

Currently, a list of basemap is definable under the componant SHOP and then used to "pick one of this basemap for the SHOP front-end interface in step 2.

We see that basemap can be used in many different componants and modules (CATALOG for example too).

I suggest to move this basemap list outside of the SHOP componant and make a independant componant (or module) to manage this list.
Then other componants like SHOP or CATALOG can point to the basemap item to choose the desired one.

Any comments ?

This is a good idea to have a fully independant basemap container which can be reused inside several EasySDI components.
As basemaps could be used by other EasySDI components, I would like to propose that basemaps definition will be part of the CORE component and not be a self component.
We must be aware when reengineering source code that basemaps definition are now used by the new MAP component.

Right Bruno... do you plan to apply theses changes with EasySDI V2 ?
For the map, the logic is indeed quite similar with based layer... just that it can have several basemaps in the same MAP instance.

Won't be done in V2 as we are still waiting to find a contributor to migrate SHOP from V1 to V2...

#4 - 12/02/2010 12:24 PM - Mérour Xavier

Are you talking about migrating SHOP or MAP component to V2 ?

- Target version set to 63

Even if it should be implemented into CORE, it's a transversal need which concern SHOP and MAP.

But you're rigth as it seems better to think about this logical when refining MAP...and not SHP.

Can I have some refreshing news on this feature ?

Is there any thing done in EasySDI V4.0 in that direction ?

#7 - 12/20/2013 03:00 PM - Magoni Bruno

- Project changed from CORE to easySDI

- Target version deleted (63)

#8 - 12/20/2013 03:00 PM - Magoni Bruno

- Category set to MAP

- Status changed from New to Accepted

- Target version set to 4.0.0

#9 - 12/20/2013 03:00 PM - Magoni Bruno

- Status changed from Accepted to Affected

#10 - 12/20/2013 03:03 PM - Magoni Bruno

- Status changed from Affected to Resolved

- Assignee deleted (Magoni Bruno)

Hi Xavier,

Good news about this feature :-)

In easySDI V4, administrator can create maps (previously map contexts) with MAP component.

All these maps can be used in other component (i.e. permieter's definition in SHOP component), so there is no more basemap or map context needed

to be defined in other component than MAP! Each map is reusable totally in each easySDI component!

#11 - 12/20/2013 03:06 PM - Mérour Xavier

- % Done changed from 0 to 100

It goes evenfurther than just "basemap" since it can includes others layers. Great news !
